# Course outline for Physics 111: Mathematical Physics I

Francis N. C. Paraan (F313, R301)\* National Institute of Physics (Dated: August 2017)

## I. COURSE INFORMATION

**Description:** Mathematical methods for physicists I. Abstract linear spaces and operators; matrix algebra, vector and tensor analysis.

Web: sand.nip.upd.edu.ph/physics111

**References:** Arfken  $5^{\text{th}}/6^{\text{th}}$  (AR).

Corequisite: Math 55.

**Credits:** 3.0

Section: THU-1 (TTh 10:00–11:30 AM).

Location: F208

### **II. CLASS POLICIES**

- Attendance: University rules state that students that accumulate six or more absences shall be given a failing grade (5.0) if they do not drop the course.
- Long Exams: There will be three sit-in long examinations of equal weights, which constitute 3/4 of the final grade. One make up exam replaces an exam missed due to a documented excused absence. Further missed exams and unexcused missed exams will be given a grade of zero.

Raw score $x$	Point grade
$90\% \le x \le 100\%$	1.00
$85\% \leq x < 90\%$	1.25
$80\% \leq x < 85\%$	1.50
$75\% \leq x < 80\%$	1.75
$70\% \le x < 75\%$	2.00
$65\% \leq x < 70\%$	2.25
$60\% \leq x < 65\%$	2.50
$55\% \leq x < 60\%$	2.75
$50\% \leq x < 55\%$	3.00
$45\% \leq x < 50\%$	4.00
x < 45%	5.00

<sup>\*</sup> fparaan@nip.upd.edu.ph

- **Problem Sets:** Problem sets and attendance quizzes make up the remaining 1/4 of the final grade. Late sets will not be given any credit. All sets must be submitted to complete the course.
- Academic honesty: Any form of cheating in examinations or any act of dishonesty in relation to studies, such as plagiarism, shall be subject to disciplinary action.

# **III. LECTURE OUTLINE**

First day of classes : T 08 Aug 2017.

#### A. Linear algebra

- 1. Matrices and vectors. Index notation. Kronecker delta.
- 2. Matrix algebra.
- 3. Determinants. Levi Cevita symbol.
- 4. Matrix inversion.
- 5. Orthogonal matrices.
- 6. Hermitian and unitary matrices.
- 7. Complex vector spaces. Bra-ket notation.
- 8. Eigenvalue problem.
- 9. Diagonalization.
- 10. Diagonalization of Hermitian matrices.
- 11. Non-degenerate and degenerate eigenvalues.
- 12. Functions of matrices.

**First LE** : Th 14 Sep 2017

## B. Vector calculus

- 1. Definitions.
- 2. Rotation of coordinate axes. Vector spaces.
- 3. Scalar and vector products.

- 4. Triple products. Gradient fields.
- 5. Divergence and curl.
- 6. Vector integration.
- 7. Integration theorems.
- 8. Potential theory.
- 9. Gauss's Law.
- 10. Dirac delta function

Second LE : Th 19 Oct 2017

## C. Curvilinear coordinates and tensor analysis

- 1. Orthogonal coordinates. Metric. Jacobians. Scale factors.
- 2. Differential operators in orthogonal coordinate systems.
- 3. Cylindrical and spherical coordinates.
- 4. Orthogonal matrices and transformations.
- 5. Tensors I. Contravariant and covariant tensors
- 6. Tensors II. Contraction and direct products
- 7. Tensors III. Covariant formulation of EM

## D. Random variables

- 1. Stochastic variables.
- 2. Moments and cumulants.
- 3. Generating functions.

Third LE : Th 07 Dec 2017
